

106TH CONGRESS
2^D SESSION

H. R. 4566

To set standards for radioactive contamination content in both the domestic and international metals industry, to prohibit the release of radioactively contaminated scrap metal by the Department of Energy and nuclear fuel production, utilization, and fabrication facilities, and to require all nations exporting metals into the United States to certify and document the amount of radioactive contamination of any scrap metals being exported into the United States.

IN THE HOUSE OF REPRESENTATIVES

MAY 25, 2000

Mr. KLINK (for himself, Mr. VISCLOSKY, Mr. MURTHA, Mr. BALDACCI, Mr. COYNE, Mr. HOLDEN, Mr. MASCARA, Mr. DOYLE, and Mr. BRADY of Pennsylvania) introduced the following bill; which was referred to the Committee on Commerce

A BILL

To set standards for radioactive contamination content in both the domestic and international metals industry, to prohibit the release of radioactively contaminated scrap metal by the Department of Energy and nuclear fuel production, utilization, and fabrication facilities, and to require all nations exporting metals into the United States to certify and document the amount of radioactive contamination of any scrap metals being exported into the United States.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE.**

4 This Act may be cited as the “Steel and Metal Con-
5 sumers Radioactivity Protection Act”.

6 **SEC. 2. FINDINGS.**

7 The Congress finds as follows:

8 (1) The metals industry in the United States is
9 a \$100,000,000,000 plus industry and employs mil-
10 lions of Americans.

11 (2) Because of their unique features, most met-
12 als can be recycled over and over again which con-
13 serves the world’s natural resources and contributes
14 to a healthy environment.

15 (3) Metal is an essential component of millions
16 of industrial, business, and consumer products. The
17 presence of radioactive contamination in steel scrap
18 and other metals resulting from the production, uti-
19 lization, and fabrication of nuclear fuel by the De-
20 partment of Energy and other facilities poses a risk
21 to public safety, threatens the metals recycling
22 stream, and can cause millions of dollars worth of
23 damage to facilities that unknowingly process con-
24 taminated metals.

1 (4) The metals industry in the United States
2 desires to keep radioactive contamination resulting
3 from the production, utilization, and fabrication of
4 nuclear fuel by the Department of Energy and other
5 facilities out of its facilities and products.

6 (5) Currently there are no approved standards
7 for the unrestricted release of metals containing ra-
8 dioactive contamination in the United States. The
9 American public has rejected all previous attempts
10 by the Nuclear Regulatory Commission to set a
11 standard for such releases. It is expected that Amer-
12 ican consumers will reject products that contain un-
13 known amounts of radioactive contamination from
14 the Department of Energy and nuclear fuel produc-
15 tion, utilization, and fabrication facilities. All such
16 releases are now done only with the specific approval
17 of the Nuclear Regulatory Commission or its agree-
18 ment States.

19 (6) However, the Nuclear Regulatory Commis-
20 sion currently is deliberating whether there is a need
21 for a rulemaking to set a specified level of radio-
22 active material in scrap and other metal that will be
23 allowed in metals for unrestricted use.

24 (7) At present, there is a lack of accountability
25 and a lack of standards regarding radioactive con-

1 tent in metals imported into the United States. The
2 Nuclear Regulatory Commission has no authority to
3 regulate these metals at the time of their importa-
4 tion.

5 **SEC. 3. DUTIES OF FEDERAL AGENCIES.**

6 (a) NUCLEAR REGULATORY COMMISSION.—

7 (1) STANDARD.—

8 (A) ESTABLISHMENT.—Not later than 24
9 months after the date of enactment of this Act,
10 the Nuclear Regulatory Commission shall estab-
11 lish, through a rulemaking under chapter 5 of
12 title 5, United States Code (relating to adminis-
13 trative procedures), a standard that controls
14 the free release of radioactively contaminated
15 scrap metal from the Department of Energy or
16 nuclear fuel cycle facilities in order to protect
17 the health and safety of the American con-
18 sumer.

19 (B) LIMITATION.— Until such standard is
20 established, the Nuclear Regulatory Commis-
21 sion and agreement States shall not take any
22 action to facilitate, implement, promulgate, or
23 issue a rule or guidance or take any other ad-
24 ministrative action that would allow the free re-

1 lease into commerce of radioactively contami-
2 nated scrap metal.

3 (2) RELEASE OF RADIOACTIVELY CONTAMI-
4 NATED EQUIPMENT, DEVICES, COMMODITIES, AND
5 OTHER MATERIALS.—Effective upon the date of en-
6 actment of this Act, all radioactively contaminated
7 equipment, devices, commodities, and other mate-
8 rials approved for general release to persons exempt
9 from licensing by the Nuclear Regulatory Commis-
10 sion or any of its agreement States will be released
11 only under the provisions of the Atomic Energy Act
12 of 1954 and its implementing regulations governing
13 the release of byproduct and source material (as de-
14 fined in section 11 of such Act (42 U.S.C. 2014)).
15 The Nuclear Regulatory Commission is prohibited
16 from establishing separate and differing release reg-
17 ulations and standards for equipment, devices, com-
18 modities, and other materials which are contami-
19 nated during the nuclear fuel production, utilization,
20 and fabrication process from those regulations and
21 standards established for equipment, devices, com-
22 modities, and other materials into which byproduct
23 and source material have been deliberately inserted
24 for their beneficial use.

1 (b) DEPARTMENTS OF DEFENSE AND ENERGY; EN-
2 VIRONMENTAL PROTECTION AGENCY; OTHER AGEN-
3 CIES.—The Departments of Defense and Energy, the En-
4 vironmental Protection Agency, and all other agencies that
5 have oversight or control over the release of radioactively
6 contaminated metals shall adopt standards that are no
7 less stringent than the standards established by the Nu-
8 clear Regulatory Commission under subsection (a). Until
9 such standards are established, the Secretary of Energy,
10 the Secretary of Defense, the Administrator of the Envi-
11 ronmental Protection Agency, and the heads of all other
12 agencies that have oversight or control over the release
13 of radioactively contaminated metals shall not take any
14 action to facilitate, promote, or allow the release into com-
15 merce of radioactively contaminated scrap metal.

16 (c) UNITED STATES CUSTOMS SERVICE.—The
17 United States Customs Service shall, within 12 months
18 after establishment of the standard under subsection (a),
19 monitor and enforce these standards at the borders of the
20 United States.

21 (d) SECRETARY OF STATE.—After the standard is es-
22 tablished under subsection (a), the Secretary of State shall
23 work with international standard-writing bodies to adopt
24 standards consistent with the standard established under
25 subsection (a).

1 (e) INTERIM CERTIFICATIONS.—Before the standard
2 established under subsection (a) takes effect, all scrap
3 metal imported into the United States must be accom-
4 panied by documentation—

5 (1) stating the amount of radioactive contami-
6 nation as certified by the government of the export-
7 ing country; and

8 (2) validating that the metal does not contain
9 any byproduct, source, or any special nuclear mate-
10 rial.

11 Such information shall be readily available as part of the
12 documentation and must accompany the shipment of these
13 products. This requirement will go into effect 90 days
14 after the date of enactment of this Act and the Secretary
15 of Commerce is directed to promulgate a final rule imple-
16 menting this requirement by that date.

17 **SEC. 4. CIVIL PENALTY FOR FALSE DOCUMENTATION.**

18 Any person who knowingly falsifies any documenta-
19 tion required under section 3(e) or required under any
20 standard in effect under section 3 shall be subject to a
21 civil penalty of not more than \$250,000 for each violation.

22 **SEC. 5. ANNUAL REPORT TO CONGRESS.**

23 The Secretary of Commerce shall not later than one
24 year after the date of enactment of this Act and annually
25 thereafter submit a report to the Congress which—

1 (1) lists the number of violations of the stand-
2 ards in effect under section 3 and the volume of tons
3 of radioactively contaminated metals involved in each
4 violation reported on; and

5 (2) for each violation, lists the number of tons
6 of radioactively contaminated metals involved in each
7 violation reported on, the country of origin of such
8 metals, and the type of metal involved.

9 **SEC. 6. DEFINITIONS.**

10 As used in this Act:

11 (1) AGREEMENT STATE.—The term “agreement
12 State” means a State that—

13 (A) has entered into an agreement with the
14 Nuclear Regulatory Commission under section
15 274 of the Atomic Energy Act of 1954 (42
16 U.S.C. 2021); and

17 (B) has authority to regulate the disposal
18 of low-level waste under such agreement.

19 (2) NUCLEAR FUEL PRODUCTION, UTILIZATION,
20 AND FABRICATION FACILITY.—The term “nuclear
21 fuel production, utilization, and fabrication facility”
22 means—

23 (A) any nuclear reactor, including those
24 designed or used primarily for the formation of
25 plutonium or uranium-233;

1 (B) any facility, equipment, or device de-
2 signed or used for the separation of the isotopes
3 of plutonium, except laboratory scale facilities
4 designed or used for experimental or analytical
5 purposes only; or

6 (C) any facility, equipment, or device de-
7 signed or used for processing irradiated mate-
8 rials containing special nuclear material or by-
9 product material, except—

10 (i) laboratory scale facilities designed
11 or used for experimental or analytical pur-
12 poses; and

13 (ii) facilities in which processing is
14 conducted pursuant to a license issued
15 under parts 30 and 70 of title 10 of the
16 Code of Federal Regulations or the equiva-
17 lent regulations of an agreement State for
18 the receipt, possession, use, and transfer of
19 irradiated special nuclear material, which
20 license authorizes the processing of the ir-
21 radiated materials on a batch basis for the
22 separation of selected fission products and
23 limits the process batch to not more than
24 100 grams of uranium enriched in the iso-

1 tope 235 and not more than 15 grams of
2 any other special nuclear material.

3 (3) RADIOACTIVELY CONTAMINATED.—The
4 term “radioactively contaminated” means any mate-
5 rial containing residual levels of radiological con-
6 tamination involving any source material, by-product
7 material, or special nuclear material as defined in
8 section 11 of the Atomic Energy Act of 1954 (42
9 U.S.C. 2014) or any waste derived therefrom.

10 (4) SCRAP METAL.—The term “scrap metal”
11 means ferrous or non-ferrous metal equipment, vehi-
12 cles, tools, and other metal items (including metal
13 pieces, parts, and bits) that are no longer being used
14 for their original purpose and are destined to be
15 processed as feedstock to produce new metal mate-
16 rials and products.
