

survivors of pancreatic cancer themselves since they are so few. In California alone, nearly 4,000 people will lose their lives to pancreatic cancer this year. An additional 12,000 Californians will die from lung cancer. Their families—and many others—have asked for our support in improving the diagnosis and treatment of pancreatic, lung, and other recalcitrant cancers.

There's no disputing that great progress has been made in our fight against cancer over the past 40 years. Consider for example the improvement we've seen in the overall five-year relative survival rate for all cancers, and the important discoveries that NCI has made through its Cancer Genome Atlas program in understanding what makes one cancer different from another. Nonetheless, there are certain cancers where we haven't seen as many gains. That's precisely why I support the approach taken in H.R. 733.

I'm very proud of the work of Chairman UPTON, Chairman PITTS, Ranking Member PALLONE, Congresswoman ESHOO, and Congressman LANCE—as well as all of our staff—on this issue. I urge my colleagues to support passage of this bill.

Mr. FATTAH. Mr. Speaker, I proudly cast a “yea” vote in support of H.R. 733, the Pancreatic Cancer Research and Education Act, with the memory of Elmer Chenault in mind. This important legislation will address the high mortality rate associated with Pancreatic Cancer. Mr. Chenault, my father-in-law, was a senior management officer and federal compliance official of the Environmental Protection Agency, Army veteran of the Korean War and a devoted family man. Elmer spent his working career in the scientific and environmental fields and was one of the first officials of the EPA, joining it shortly after it was founded in 1970 under President Richard M. Nixon. He grew up in Wyoming, Ohio, a suburb of Cincinnati. Joining the EPA in the early '70s, Elmer became a tireless advocate for environmental justice for communities of color and the economically disadvantaged.

His passing was a trying time for my family, an experience too many know too well when confronting this terrible disease, and his loss continues to be felt by many in Philadelphia. I thank my colleague from California for her stalwart support for this legislation and look forward to a time when no family must face the scourge of Pancreatic Cancer.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Pennsylvania (Mr. PITTS) that the House suspend the rules and pass the bill, H.R. 733, as amended.

The question was taken; and (two-thirds being in the affirmative) the rules were suspended and the bill, as amended, was passed.

The title was amended so as to read: “A bill to provide for scientific frameworks with respect to recalcitrant cancers.”

A motion to reconsider was laid on the table.

MOURNING THE LOSS OF SHERIFF LARRY DEVER

(Mr. FLAKE asked and was given permission to address the House for 1 minute.)

Mr. FLAKE. Mr. Speaker, Arizonans were greeted this morning with the unwelcome news that Cochise County Sheriff, Larry Dever, passed away last night in an automobile accident. The great State of Arizona is in a state of mourning.

Respected throughout the State as a leader and a lawman, Sheriff Dever was also recognized nationally as an authority on immigration and border issues. Every Senator, Congressman, Governor, and local official who wanted to know what was really happening in southern Arizona sought Sheriff Dever's counsel. No meetings or briefings, Powerpoint presentations, flip charts, or easels could compare to a couple of hours in the passenger seat of his pickup truck, driving bumpy roads, one-on-one with the sheriff.

To us, Sheriff Dever was the consummate lawman: tough, fair-minded, straight shooting, no nonsense. To his wife, Nancy, he was a devoted husband. To his six sons, he was a caring father. To his 11 grandchildren, he was a proud and doting grandfather.

To those of us who call Arizona home, we are grateful for the past 60 years that Sheriff Dever has called Arizona home as well.

STOP THE WAR ON COAL

The SPEAKER pro tempore. Under the Speaker's announced policy of January 5, 2011, the gentlewoman from West Virginia (Mrs. CAPITO) is recognized until 10 p.m. as the designee of the majority leader.

Mrs. CAPITO. Thank you, Mr. Speaker.

We have 10 minutes here, and I am very proud to be here tonight to talk about a bill that is on the floor on Friday, and that is the Stop the War on Coal Act of 2012. I hail from the great State of West Virginia, one of the largest coal-producing States in this Nation. Quite frankly, I am here for three reasons.

The first reason is that I am extremely concerned about the job loss and the economic devastation that this war on coal is having on our State of West Virginia. We had really sad news just yesterday. Alpha Coal announced that 1,200 coal mining jobs in the region were going to be cut. Now, that sounds like a lot of jobs, but then when you think about it, that's 1,200 families, and that's 1,200 men and women who will come home tonight and who came home last night. So we say we're going to have to do something.

And why is it? We don't have enough time to get into all of the details, but I do think it is part and parcel of the regulatory environment of this administration, that it's the philosophy of this administration that coal is not good for the country, and it's a lack of education, really, on the acknowledgment of the base load energy that coal brings to this Nation.

I am here to stand up for the families and businesses that are going to see a rise in their electric bills. I am also here for the reliability of the electric grid to make sure that we have affordable energy.

I would like to bring my friend from Pennsylvania in. We've been waiting a while. The Stop the War on Coal Act is coming up on Friday, which the President's energy plan is destroying, if you can even call it a plan. I mean, we're from an all-of-the-above plan. We've worked together on this, Mr. MURPHY and I. We've already lost over 2,000 jobs, and 55 units are going to retire across America, in large part, due to EPA rules and regulations. How many jobs is that? These Boiler MACT rules, these Utility MACT rules, coal ash rules are all job killers.

I would like to yield to the gentleman from Pennsylvania, since we're on limited time, and ask him to give his perspectives on what we know is a war on coal.

Mr. MURPHY of Pennsylvania. I thank the gentlelady from West Virginia. Thank you also for your tireless advocacy for coal as we are here fighting the war on coal.

It's interesting. I remember when I was attending college at Wheeling Jesuit University. Oftentimes, for charitable activities, we'd go into the mountains of Appalachia and help families where coal mines had shut down because they were played out, and we'd seen the incredible poverty there. We also know that, over the last century, miners toiled for years in those coal patch towns and tried to make things safer, and they accomplished that. They worked for better wages, and they accomplished that. Now they're fighting for their very existence and their jobs and livelihoods.

To add to what you're saying about the jobs here, this is not just coal miners. It's the manufacturers who make the longwall equipment—the continuous miners, the rails, the wire, the ventilators, the elevators, the safety equipment. They are fighting for their jobs. It's the railroads, the trucks, the barges, the workers who make the rails, the hopper cars, the barges, the trucks who are there, fighting for their jobs.

Where will they go? Really, this is not just an attack on some of the power plants. We may lose 175 or so initially. The goal is to shut down 400 power plants altogether. What will happen then?

Now, this keeps the President's pledge that, if you want to use coal, it will bankrupt you, but it's also going to bankrupt these families when they can't pay their bills when their electric rates go up. They're already paying \$3,000 more per year for their gasoline for their cars. Interior Secretary Ken Salazar told the Democratic National Convention:

Under President Obama's leadership, the U.S. moved forward with an all-of-the-above energy strategy—oil, gas, nuclear, hydro,
