Whereas prostate cancer is the most commonly diagnosed non-skin cancer and the second most common cause of cancer-related deaths among males in the United States;

Whereas 40 percent of newly diagnosed prostate cancer cases occur in males under the age of 65;

Whereas approximately every 14 seconds, a male in the United States turns 50 years old and increases his odds of developing cancer, including prostate cancer;

Whereas African-American males suffer from a prostate cancer incidence rate that is up to 65 percent higher than that for white males and have double the prostate cancer mortality rate than that of white males;

Whereas obesity is a significant predictor of the severity of prostate cancer;
