1 **SEC. 2. FINDINGS.**

2 Congress finds that—

3 (1) many areas of undeveloped National Forest  
4 System land, National Park System land, and public  
5 land administered by the Bureau of Land Manage-  
6 ment in the States of Idaho, Montana, Oregon,  
7 Washington, and Wyoming (referred to in this sec-  
8 tion as “public land”)—

9 (A) possess outstanding natural character-  
10 istics that give the areas value as wildernesses,  
11 parks, or wild and scenic rivers; and

12 (B) if properly preserved, will be an endur-  
13 ing resource as wildernesses and wildland areas  
14 and of biodiversity for the benefit of the people  
15 of the United States;

16 (2) the Northern Rockies Bioregion—

17 (A) contains the most diverse array of  
18 wildland that remains in the United States  
19 south of Canada;

20 (B) provides a sanctuary for species listed  
21 as threatened or endangered under the Endan-  
22 gered Species Act of 1973 (16 U.S.C. 1531 et  
23 seq.);

1 (C) is national interest public land that is  
2 among the most popular wildland in the United  
3 States; and

4 (D) embraces greater ecosystems and na-  
5 tional treasures such as the Greater Yellow-  
6 stone, Greater Glacier/Northern Continental Di-  
7 vide, Greater Hells Canyon/Wallowa, Greater  
8 Salmon/Selway, and Greater Cabinet/Yaak/Sel-  
9 kirk ecosystems;

10 (3) the natural ecosystems in the Northern  
11 Rockies Bioregion are largely dependent on—

12 (A) public land; and

13 (B) the ecological productivity and diver-  
14 sity of resources on public land;

15 (4) conservation of roadless areas on public  
16 land—

17 (A) produces clean water;

18 (B) protects native fisheries and native  
19 flora and fauna;

20 (C) provides scenic and recreational quali-  
21 ties; and

22 (D) preserves options for sustainable eco-  
23 nomics through activities such as hunting, fish-  
24 ing, and wilderness-based recreation;

1           (5) the headwaters of several major river sys-  
2           tems, including the Columbia, Snake, Green, Mis-  
3           souri, and Saskatchewan Rivers, are in the Northern  
4           Rockies Bioregion, and the water of those rivers—

5                   (A) flows to 3 oceans;

6                   (B) is of economic importance to farming  
7           and ranching operations, municipal water sup-  
8           plies, and water-based recreation, including  
9           fishing and boating; and

10                  (C) if protected, will enhance the uses de-  
11           scribed in subparagraph (B), reduce costs for  
12           water treatment and irrigation, and increase  
13           native fish populations;

14           (6) the wildlife treasures of the Northern Rock-  
15           ies Bioregion are of international significance and  
16           contain intact, large mammalian fauna and rare and  
17           unique plant life;

18           (7) wildlife habitat fragmentation due to road  
19           building, timber harvesting, mining, oil and gas ex-  
20           ploration, lack of interagency cooperation, and other  
21           activities has severe effects on—

22                   (A) the wildlife populations of the North-  
23           ern Rockies Bioregion (including populations of  
24           species listed as threatened or endangered  
25           under the Endangered Species Act of 1973 (16

1 U.S.C. 1531 et seq.)) and the habitats of the  
2 wildlife; and

3 (B) the water quality, ancient forests, and  
4 greater ecosystems of the Northern Rockies  
5 Bioregion;

6 (8) the overemphasis on resource extraction  
7 from public land has—

8 (A) compromised ecosystem integrity and  
9 detracted from economic diversification oppor-  
10 tunities; and

11 (B) resulted in economic instability and  
12 high unemployment in rural, resource-depend-  
13 ent communities;

14 (9) the fragmentation and development of the  
15 remaining roadless and essentially roadless eco-  
16 systems and biological connectors of the Northern  
17 Rockies Bioregion would cause a loss to the United  
18 States of—

19 (A) an entire wildland region; and

20 (B) the only remaining area in the United  
21 States south of Canada that can support popu-  
22 lations of caribou, gray wolves, grizzly bears,  
23 anadromous fish, and other rare or endangered  
24 plant or animal life in 1 intact bioregion;

1           (10) since the completion of the 1936 roadless  
2 area inventory by Bob Marshall, millions of acres of  
3 roadless wildland have been developed in the North-  
4 ern Rockies Bioregion;

5           (11) extensive fragmentation of wildland and  
6 wildlife habitat has—

7           (A) resulted in the listing of several species  
8 as threatened or endangered under the Endan-  
9 gered Species Act of 1973 (16 U.S.C. 1531 et  
10 seq.); and

11           (B) reduced the number and range of  
12 other species, including anadromous fish;

13           (12) the natural ecosystems of the Northern  
14 Rockies Bioregion serve as educational and research  
15 centers for onsite studies in biology, geology, astron-  
16 omy, and other sciences;

17           (13) the pristine nature of public land helps  
18 local communities attract new residents and busi-  
19 nesses based on local quality of life;

20           (14) a review of the situation in the Northern  
21 Rockies Bioregion as of the date of enactment of  
22 this Act has revealed the urgent need for an ecologi-  
23 cal reserve system for the Northern Rockies Bio-  
24 region that includes core ecosystem reserve areas  
25 and biological connecting corridors necessary to en-

1       sure wildlife movements and genetic interchange be-  
2       tween the core reserve areas;

3           (15) wildlife freedom of movement is essential  
4       to the survival of wildlife species, and a number of  
5       scientific studies have identified movement corridors  
6       as necessary for wildlife conservation in a changing  
7       climate;

8           (16) several foreign governments, including the  
9       governments of Australia and Scotland, have an-  
10      nounced plans for corridors that would make wildlife  
11      movement possible as climate pressures increase;

12           (17) the concept of connective corridors for  
13      wildlife movement—

14           (A) has been endorsed by the Governors of  
15      States in the western United States; and

16           (B) is recognized by conservation and sci-  
17      entific organizations, such as the National  
18      Academy of Sciences, which, in 2008, described  
19      freedom of movement for wildlife as basic to the  
20      emerging new science of movement ecology;

21           (18) freedom of wildlife movement—

22           (A) was a fundamental reason for the de-  
23      velopment and introduction of this Act; and

24           (B) has become an increasingly high-pro-  
25      file issue in the climate and biological sciences;

1           (19) the economic value to the United States of  
2 most of the public land, left in its natural state, ex-  
3 ceeds any potential return to the Treasury of the  
4 United States from timber harvest and development;

5           (20) if Federal land management in the North-  
6 ern Rockies Bioregion continues to result in develop-  
7 ment in roadless areas, the Federal Government will  
8 be using tax revenues to fund permanent reductions  
9 in wilderness, water quality, fish and wildlife habi-  
10 tat, species, and biological diversity;

11           (21) this Act—

12           (A) provides opportunities for employment  
13 in outdoor trades by establishing rehabilitation  
14 zones on specific tracts of damaged Federal  
15 land where active restoration work will occur;

16           (B) will provide contracts for local busi-  
17 nesses; and

18           (C) will renew the intrinsic economic, so-  
19 cial, and cultural benefits that result from pro-  
20 ductive land;

21           (22) Federal land rehabilitation projects—

22           (A) have direct benefits to local economies;  
23 and

1 (B) reduce the loss to taxpayers in the  
2 United States caused by below-cost timber sales  
3 and other subsidized resource extraction;

4 (23) a congressional review of roadless areas  
5 within public land identifies—

6 (A) areas that, on the basis of the land  
7 form, ecosystem, associated fish and wildlife,  
8 economic value, and location of the areas, will  
9 help to fulfill the role of the Forest Service, Na-  
10 tional Park Service, and Bureau of Land Man-  
11 agement to ensure a quality National Wilder-  
12 ness Preservation System;

13 (B) areas that may have value as wild and  
14 scenic rivers; and

15 (C) areas that—

16 (i) may not possess wilderness at-  
17 tributes and should not now be designated  
18 as components of the National Wilderness  
19 Preservation System; and

20 (ii) should be studied to determine the  
21 role of the areas in maintaining biological  
22 diversity in the Northern Rockies Bio-  
23 region;

24 (24) many areas of public land—

1 (A) have been damaged and experienced a  
2 reduction in productivity due to unwise develop-  
3 ment practices, which have also impaired eco-  
4 system function and biological diversity, such as  
5 the Island Park area adjacent to Yellowstone  
6 National Park, which contains large clear-cut  
7 areas that border the park boundary; and

8 (B) should be returned to the former eco-  
9 logical health and native diversity of the areas  
10 through efforts—

11 (i) to ensure that vital ecosystem com-  
12 ponents are restored, especially in areas in  
13 which wildlife travel corridors and native  
14 fish and wildlife populations have been  
15 damaged or eliminated; and

16 (ii) to ensure and maintain genetic  
17 interchange, biological diversity, and res-  
18 toration of native species diversity through-  
19 out the Northern Rockies Bioregion;

20 (25) backcountry areas of the National Park  
21 System have been damaged by inappropriate man-  
22 agement, despite policies that require that rec-  
23 ommended wilderness be administered as wilderness;

24 (26) an emphasis on structures and motorized  
25 equipment, and in some instances developed

1 backcountry campsites, in backcountry areas of the  
2 National Park System has detracted from and de-  
3 graded the wilderness character of those  
4 backcountry areas;

5 (27) Federal agencies entrusted with managing  
6 the natural resources of the Northern Rockies Bio-  
7 region—

8 (A) operate under contradictory congres-  
9 sional mandates; and

10 (B) are in dissension over management  
11 policies that involve common resources and  
12 greater ecosystems;

13 (28) Federal agency structures and regulatory  
14 mechanisms as of the date of enactment of this Act  
15 have proven unsatisfactory for the responsible man-  
16 agement of nationally important ecosystems on pub-  
17 lic land;

18 (29) Federal laws and regulations as of the  
19 date of enactment of this Act have not been suffi-  
20 cient to establish and maintain the accountability of  
21 Federal agencies for public resources; and

22 (30) this Act does not affect private existing  
23 rights.

24 **SEC. 3. PURPOSES.**

25 (a) IN GENERAL.—The purposes of this Act are—

1           (1) to designate certain National Forest System  
2 land, certain National Park System land, and cer-  
3 tain public land administered by the Bureau of Land  
4 Management in the States of Idaho, Montana, Or-  
5 egon, Washington, and Wyoming as components of  
6 the National Wilderness Preservation System;

7           (2) to designate certain National Forest System  
8 land, certain public land administered by the Bureau  
9 of Land Management, and watercourses on that Na-  
10 tional Forest System land and public land in the  
11 States of Montana, Idaho, and Wyoming as compo-  
12 nents of the National Wild and Scenic Rivers Sys-  
13 tem;

14           (3) to prioritize areas for wildland recovery to  
15 help restore biological diversity and native species;  
16 and

17           (4) to establish a system of biological con-  
18 necting corridors between the core ecosystems in the  
19 Northern Rockies Bioregion.

20           (b) PURPOSE OF DESIGNATIONS.—The designations  
21 of land made by this Act are made—

22           (1) to promote, perpetuate, and preserve the  
23 wilderness character of the designated land;

24           (2) to protect water quality, watersheds, and  
25 wildlife habitats, including the habitats of species

1 listed as threatened or endangered under the Endan-  
2 gered Species Act of 1973 (16 U.S.C. 1531 et seq.);

3 (3) to protect the ecological integrity and con-  
4 tiguity of major wildland ecosystems and the inter-  
5 connecting corridors of the ecosystems identified by  
6 the Director of the United States Fish and Wildlife  
7 Service or another official;

8 (4) to protect and maintain biological and na-  
9 tive species diversity and dispersal throughout the  
10 Northern Rockies Bioregion;

11 (5) to promote and ensure interagency coopera-  
12 tion in the implementation of integrated, holistic  
13 ecosystem management and protection of the eco-  
14 systems and corridors covered by this Act based on  
15 principles from conservation biology;

16 (6) to preserve scenic, historic, and cultural re-  
17 sources;

18 (7) to promote scientific research, primitive  
19 recreation, solitude, physical and mental challenges,  
20 and inspiration for the benefit of the people of the  
21 United States;

22 (8) to avoid the misinvestment of scarce capital  
23 in land of marginal timber value; and

1           (9) to promote ecologically and economically  
2           sustainable management in the Northern Rockies  
3           Bioregion.

4 **SEC. 4. DEFINITIONS.**

5           In this Act:

6           (1) CORRIDOR.—The term “corridor” means an  
7           area that provides connectivity of habitat or poten-  
8           tial habitat, and that facilitates the ability of terres-  
9           trial, estuarine, and freshwater fish, or wildlife, to  
10          move within a landscape—

11                  (A) as needed for migration, gene flow, or  
12                  dispersal; or

4 maintain populations of large vertebrate species  
5 and the other native plant and animal species  
6 of the unit; and

7 (ii) comprised of land that is similar in to-  
8 pography, climate, and plant and animal species  
9 on the land; or

11 life indicator species listed as threatened or en-  
12 dangered under the Endangered Species Act of  
13 1973 (16 U.S.C. 1531 et seq.), including the  
14 grizzly bear, lynx, or caribou, as depicted on  
15 habitat maps of Federal agencies.

16 (4) HABITAT.—The term “habitat” means the  
17 physical, chemical, and biological properties that are  
18 used by fish, wildlife, or plants for growth, reproduc-  
19 tion, survival, food, water, and cover on a tract of  
20 land, in a body of water, or in an area or region.

21 (5) INDIAN TRIBE.—The term “Indian tribe”

15 spect to National Park System land and public  
16 land.

## 17           **TITLE I—DESIGNATION OF** 18           **WILDERNESS**

### 19   **SEC. 101. PURPOSE.**

20           The purpose of this title is to designate certain Na-  
21 tional Forest System land, National Park System land,  
22 and public land administered by the Bureau of Land Man-  
23 agement in the States of Idaho, Montana, Oregon, Wash-  
24 ington, and Wyoming as wilderness and as components of  
25 the National Wilderness Preservation System in further-

1 ance of the purposes of the Wilderness Act (16 U.S.C.

3 **SEC. 201. FINDINGS.**

4           The Congress finds that, as of the date of enactment

6                   (1) the most recent scientific information on ec-  
7 ological reserve design and function, including recent  
8 scientific information on species dispersal in re-  
9 sponse to a changing climate, points out the critical  
10 need for biological connecting corridors between the  
11 larger core ecosystem areas;

12                   (2) while none of the remaining major wild land  
13 ecosystems of the Northern Rockies Bioregion ap-  
14 pears to be of sufficient size to perpetuate the full  
15 complement of self-sustaining viable populations of  
16 native wildlife, biological diversity, and full range of  
17 ecological processes on its own, it appears that an  
18 effective reserve system can be achieved if biological  
19 connecting corridors between the ecosystems are  
20 identified and protected;
