□ 1904

So (two-thirds being in the affirmative) the rules were suspended and the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

#### CONGRATULATIONS, MINNETONKA SCHOOLS

(Mr. PAULSEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PAULSEN. Mr. Speaker, I am thrilled to recognize the Minnetonka School District for being named the number one school district in Minnesota by Niche, a Web site that analyzes education data across the country. The Minnetonka School District has received an overall A-plus grade based on their excellence in several areas, including academics, educational outcomes, teachers, and extracurricular opportunities. The school district received an A grade or higher in 9 out of 10 different categories considered in the analysis.

Mr. Speaker, I commend the teachers and the administrators of the Minnetonka schools for their commitment to going above and beyond in educating students from preschool to graduation. By dedicating themselves to providing an enriching learning environment, these educators are equipping students with all the necessary tools to not only excel in the classroom but also contribute to leadership on sports teams, clubs, and in our community.

We are proud to have such an exemplary school system in our own backyard. Congratulations to the teachers, the students, the administrators, and the parents of Minnetonka for this distinguished recognition.

#### FEDERAL FUNDING WILL COMBAT WHITE-NOSE SYNDROME

(Mr. THOMPSON of Pennsylvania asked and was given permission to ad-

dress the House for 1 minute and to revise and extend his remarks.)

Mr. THOMPSON of Pennsylvania. Mr. Speaker, I know that I join a large number of my colleagues here in the House in concern over the white-nose syndrome. It is a devastating fungus that has killed between 5.7 million and 6.7 million bats across North America.

Recently, I received news of grant funding from the U.S. Fish and Wildlife Service to combat this disease and that Pennsylvania will receive more than \$30,000.

As a member of the House Committee on Natural Resources, I have been active in ensuring the effects of white-nose syndrome were appropriately addressed. I have participated in field hearings on the subject and toured habitats where bat populations have been devastated by this fungus. There is an ecological importance to sustaining the bat population as well as preventing the species from becoming endangered, which would cause great harm to resource production, agriculture, and construction across the Commonwealth and a large part of the country.

A rule finalized in 2015, which listed the northern long-eared bat, cleared the way for new conservation practices to be put in place where necessary, helping make new conservation measures possible without broadly prohibiting common land-use activities. It is my hope that these measures will help us in the effort against white-nose syndrome.

#### UNDERWATER RESOURCE MAPPING

(Mr. MCNERNEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MCNERNEY. Mr. Speaker, I rise today to discuss recent developments in the area of underwater resource mapping. Scientists at the Scripps Institution of Oceanography used NSF funding to develop instruments to conduct marine electromagnetic surveys. This technology uses electrical currents and conduction to search for freshwater aquifers in the ocean, which will reveal the location of drinking water supplies deep below the surface of the sea.

It has been clear to scientists for 40 years that bodies of freshwater exist off the U.S. East Coast. This research created the only noninvasive method capable of sensing the exact location of these valuable drinking water reserves.

This technology has also attracted the attention of oil companies, which continue to develop the Scripps system to map out underwater resource deposits in three dimensions across the globe. Important projects like these improve our search for natural resources, and I commend the Scripps Institution and the National Science Foundation.
