NATIONAL VOLCANO EARLY WARNING AND MONITORING SYSTEM ACT

Mr. MCCONNELL. Mr. President, I ask unanimous consent that the Senate proceed to the immediate consideration of Calendar No. 150, S. 346.

The PRESIDING OFFICER. The clerk will report the bill by title.

The bill clerk read as follows:

(The parts of the bill intended to be stricken are shown in boldface brackets and the parts of the bill intended to be inserted are shown in italic.)

S. 346

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the “National Volcano Early Warning and Monitoring System Act”.

SEC. 2. FINDINGS.

[Congress finds that—

[(1) the United States and the territories of the United States contain 169 hazardous volcanoes;

[(2) since 1980, eruptions have claimed many lives and cost billions of dollars in property damage in the United States;

[(3) ash eruptions pose a hazard to high-flying jet aircraft, including the more than 50,000 passengers who travel on jets over Alaska and the North Pacific every day;

[(4) in 1989, an eruption of Redoubt Volcano, Alaska, caused in-flight failure of all 4 engines of a passenger Boeing 747 aircraft;

[(5) international flights over the Commonwealth of the Northern Mariana Islands and the intense domestic air traffic of the Pacific Northwest also face potential engine failure in the event of an eruption;

[(6) mudflows from ice-clad Cascade volcanoes of the States of Washington, Oregon, and California pose a serious hazard to cities and transportation arteries in the Pacific Northwest;

[(7) lava flows, toxic gas emissions, and explosions impact residents and visitors to the State of Hawaii and have the potential to cause catastrophic property damage;

[(8) frequent seismic unrest requires careful monitoring in the Mammoth Lakes area of the State of California and Yellowstone National Park in the States of Wyoming, Montana, and Idaho;

[(9) modern technology, in the form of geophysical monitoring networks on the ground and the use of near real-time satellite data, makes possible early warnings typically weeks or months before eruptions, giving emergency response agencies and the public time to prepare, which minimizes potential damage to property and loss of life;

[(10) the efficacy of monitoring is being demonstrated by—

[(A) the successful forecasts and warnings of Augustine Volcano in 1986 and 2006, Redoubt Volcano in 1989 through 1990 and 2009, and Mt. Spurr in 1992; and

[(B) warnings and forecasts of lava flow advancement in Hawaii during the ongoing eruption of Kilauea;

[(11) the United States Geological Survey and university and State partners of the United States Geological Survey operate—

[(A) the Alaska Volcano Observatory located in Anchorage and Fairbanks, Alaska;

[(B) the Cascades Volcano Observatory located in Vancouver, Washington;

[(C) the Hawaiian Volcano Observatory located in Hawai'i Volcanoes National Park, Hawaii;

[(D) the Yellowstone Volcano Observatory located in Yellowstone National Park in the States of Wyoming, Montana, and Idaho; and

[(E) the California Volcano Observatory, located in Menlo Park, California; and

[(12) a detailed survey of the volcanoes in the United States and the monitoring status of those volcanoes has revealed numerous serious monitoring gaps, leaving the United States exposed to preventable damage from large volcanic eruptions.]
