

a time I had truly hoped would remain in the past. We must continue to be vigilant against anything that would impede the right to vote. We must also protect our democratic institutions for the people, and not just for a few wealthy interests.

The U.S. election system is complex and highly decentralized, encompassing approximately 10,000 local, county, and state election offices. States and local jurisdictions face a number of challenges in their administration of federal elections, including outdated and insecure technology. Most of us are on screens all day long and have become accustomed to the convenience. There are probably some young people that don't like to read on paper at all. However, when it comes to electronic voting systems, these same conveniences may be subject to technical malfunctions as well as significant cybersecurity risks that have already been shown, in real elections, to undermine Americans' constitutional right to vote.

The last major voting legislation was passed almost two decades ago. It created several new responsibilities for the National Institute of Standards and Technology (NIST) to work with the Election Assistance Commission, election administrators, and manufacturers on voting systems technology standards development. The Science Committee was active in the development of that language.

Today's bill, H.R. 1, makes an effort at expanding NIST's role in voting and elections technology. While I support H.R. 1 overall, I do have some concerns with the proposed new scope of activities for NIST. NIST's core mission is measurement science and standards. Most people have never heard of NIST and don't understand what it does, but NIST plays a central and unique role in advancing U.S. competitiveness as well as in cybersecurity across the public and private sector. The agency has no regulatory authority, which allows it to win the trust of and work closely with industry and all kinds of stakeholders in the standards development process. The Science Committee has worked very hard to preserve this standards development function of NIST. NIST expressed concern to us that some of the language in this bill may compromise the agency's ability to work closely with states and counties on elections technology. In addition, while other provisions in the bill are better aligned with NIST's mission and worthy of support, we must ensure there is additional funding for NIST to accomplish these important goals. As this bill moves through the legislative process, I look forward to working with my colleagues in the House and Senate to address both of these issues.

Election and voting integrity and security are important to everyone in this Chamber on both sides of the aisle, and my colleagues on the Science Committee are eager to present legislative ideas for the role of NIST in voting and elections technology, as well as recommendations for sufficient levels of support to ensure the agency can succeed in this mission.

Mr. Chair, I support H.R. 1 and urge its passage.
