

individuals in need of rehabilitation, and the development of an accreditation system for rehabilitation counselors supports the continued education of rehabilitation counselors: Now, therefore, be it

*Resolved*, That the Senate—

(1) designates March 22, 2019, as “National Rehabilitation Counselors Appreciation Day”; and

(2) commends—

(A) rehabilitation counselors for their dedication and hard work in providing counseling to individuals with disabilities who are in need of rehabilitation; and

(B) professional organizations for their efforts in assisting individuals with disabilities who are in need of rehabilitation.

**SENATE RESOLUTION 118—RECOGNIZING THE IMPORTANCE OF PAYING TRIBUTE TO THOSE INDIVIDUALS WHO HAVE FAITHFULLY SERVED AND RETIRED FROM THE ARMED FORCES OF THE UNITED STATES, DESIGNATING APRIL 18, 2019, AS “MILITARY RETIREE APPRECIATION DAY”, AND ENCOURAGING THE PEOPLE OF THE UNITED STATES TO HONOR THE PAST AND CONTINUED SERVICE OF MILITARY RETIREES TO THEIR LOCAL COMMUNITIES AND THE UNITED STATES**

Ms. WARREN (for herself, Mr. CRUZ, Mr. JONES, Mr. DAINES, Mr. MURPHY, Mrs. CAPITO, Mr. VAN HOLLEN, Mr. TILLIS, Mr. BLUMENTHAL, Mr. PERDUE, Mr. KAINE, Mr. RUBIO, Ms. HIRONO, Mr. WICKER, Ms. HASSAN, Mr. SULLIVAN, Mr. PETERS, Mr. YOUNG, Mr. WARNER, Mr. HAWLEY, Mr. MARKEY, Mr. ROUNDS, and Ms. MURKOWSKI) submitted the following resolution; which was referred to the Committee on the Judiciary:

S. RES. 118

Whereas there are approximately 2,000,000 retirees of the Armed Forces of the United States who have earned their retirement through career service, a service-connected disability, or both;

Whereas military retirees show an unrivaled dedication to service, having faithfully served their country and dedicated much of their lives knowing that at any moment they could be sent anywhere in the world and possibly asked to make the ultimate sacrifice to protect and defend the national security of the United States;

Whereas military retirees, through their perseverance and dedication—

(1) have proven to be leaders who are resilient, focused, disciplined, well-trained, and well-educated; and

(2) bring the best qualities of citizenship in the United States to lifelong service within their national and local communities as dependable, responsible citizens and neighbors;

Whereas the qualities of a military retiree often result in positive contributions to—

(1) the civilian workforce, as experienced and knowledgeable employees;

(2) local educational institutions, as teachers, counselors, and coaches;

(3) local government, as elected public servants; and

(4) communities, as dedicated and effective volunteers;

Whereas the dedication and focus of military retirees helps strengthen and stabilize local communities; and

Whereas the contributions of military retirees to their communities are the mani-

festation of the desire of the retirees to continue their selfless acts of volunteering and their lifelong service to the United States: Now, therefore, be it

*Resolved*, That the Senate—

(1) designates April 18, 2019, as “Military Retiree Appreciation Day”; and

(2) encourages the people of the United States to honor the past and continued service of military retirees to their local communities and the United States through appropriate ceremonies and other activities.

**SENATE RESOLUTION 119—SUPPORTING THE GOALS OF WORLD TUBERCULOSIS DAY TO RAISE AWARENESS ABOUT TUBERCULOSIS**

Mr. BROWN (for himself and Mr. SULLIVAN) submitted the following resolution; which was referred to the Committee on Health, Education, Labor, and Pensions:

S. RES. 119

Whereas  $\frac{1}{4}$  of the population of the world is infected with the tuberculosis bacterium (commonly referred to as “TB”);

Whereas the World Health Organization (commonly referred to as the “WHO”) estimates that 10,000,000 people developed TB in 2017, nine percent of whom were also infected with the human immunodeficiency virus (commonly referred to as “HIV”);

Whereas, in 2017, TB killed an estimated 1,600,000 people, causing more deaths worldwide than any other single infectious agent;

Whereas  $\frac{2}{3}$  of new TB infections in 2017 occurred in India, China, Indonesia, the Philippines, Pakistan, Nigeria, Bangladesh, and South Africa;

Whereas TB is a leading killer of people infected with HIV, and 300,000 people with HIV died of TB in 2017;

Whereas additional vulnerable populations at high risk for developing TB include pregnant women and newborns;

Whereas TB is one of the six leading causes of death among adult women between the ages of 15 and 49 in low-income countries, and women with TB can face stigma, discrimination, and in some settings ostracization by their families and communities;

Whereas the global TB epidemic and the spread of drug-resistant TB present a persistent public health threat to the United States because the disease does not recognize borders;

Whereas antibiotic-resistant pathogens are a growing problem worldwide, and drug-resistant TB can occur when the drugs used to treat TB are misused or mismanaged;

Whereas studies have demonstrated direct person-to-person transmission of drug-resistant TB;

Whereas multi-drug resistant TB (commonly referred to as “MDR-TB”) is caused by bacteria with resistance to rifampin and isoniazid, the two most potent treatments for TB infection;

Whereas, according to the 2018 WHO Global Tuberculosis Report, in 2017 an estimated 3.5 percent of all new TB cases and 18 percent of previously treated cases were MDR-TB or rifampin-resistant TB;

Whereas, in 2017, an estimated 558,000 people around the world developed MDR-TB or rifampin-resistant TB, yet only approximately 25 percent of those individuals have been identified and treated;

Whereas extensively drug-resistant TB (commonly referred to as “XDR-TB”) is a rare type of TB that is resistant to nearly all medicines, and therefore can be very dif-

ficult and expensive to treat, especially among patients with HIV and acquired immune deficiency syndrome (commonly referred to as “AIDS”);

Whereas, according to the 2018 WHO Global Tuberculosis Report, in 2017, 127 countries reported at least one case of XDR-TB;

Whereas, in 2017, the Centers for Disease Control and Prevention estimated that the cost of treating a single patient with MDR-TB in the United States averaged \$164,000, and the average cost of treating a patient with XDR-TB was even higher at \$526,000, compared with \$19,000 to treat a patient with drug-susceptible TB;

Whereas MDR-TB and XDR-TB cases in the United States between 2005 and 2007 collectively cost the health care system an estimated \$53,000,000, according to an analysis by the Centers for Disease Control and Prevention;

Whereas the Centers for Disease Control and Prevention estimates that costs resulting from all forms of TB in the United States totaled more than \$460,000,000 in 2017;

Whereas, in a 2000 report, the Institute of Medicine found that a decrease in TB control funding and the spread of HIV and AIDS caused a resurgence of TB in the late 1980s and early 1990s;

Whereas a total of 9,105 TB cases were reported in the United States in 2017, representing all 50 States and the District of Columbia, and up to 13,000,000 people in the United States are estimated to be living with latent TB infection;

Whereas 75 percent of States have reported an increase in the proportion of complex cases of TB in recent years due to factors such as homelessness, HIV infection, drug resistance, substance abuse, refugee status, and other factors;

Whereas the rate of TB disease in African Americans is eight times higher than the rate in White non-Hispanic Americans, and significant disparities exist among other minorities in the United States, including Native Americans and Alaska Natives, Asian Americans, and Hispanic Americans, with 86 percent of all reported TB cases in the United States in 2016 occurring in racial or ethnic minorities;

Whereas, globally in 2017, an estimated 1,000,000 children developed TB and 230,000 children died of TB;

Whereas smoking greatly increases the risks of contracting TB and TB recurrence and impairs the response to treatment;

Whereas diabetes is a major risk factor for TB, and people with diabetes are more likely to develop TB and have a higher risk of death due to TB;

Whereas bedaquiline is an antibiotic that boosts an MDR-TB patient’s chance of survival from approximately 50 percent to as much as 80 percent, and through a public-private partnership, the United States Agency for International Development (commonly referred to as “USAID”) provided approximately 30,000 treatments in 110 countries from 2015 through the end of February 2018;

Whereas Bacillus Calmette-Guerin, a TB vaccine that is known as “BCG”, provides some protection to infants and young children but has had little epidemiologic impact on TB worldwide;

Whereas there is a critical need for new drugs, diagnostics, and vaccines for controlling the global TB epidemic;

Whereas, in September 2018, the United Nations held the first high-level meeting on TB in which 120 countries, including the United States, signed a political declaration committing to accelerating the TB response, including by increasing funding for TB control programs and research and development efforts, with the goal of reaching all affected people with TB prevention and care;
