

about an organization that is near and dear to my heart: the Lions Clubs International.

I am a member of my hometown organization, the Howard Area Lions Club. The Howard Area Lions Club has consistently earned the recognition as the largest Lions Club in Pennsylvania.

There are probably many factors that have led them to this, but none more significant than their commitment to the Lions Club motto, "We Serve."

The members of my club served as the chartering organization for the Howard Boy Scout Troop 353; and, in the past, I was proud to serve as Scoutmaster of that unit.

Simply put, service is of the utmost importance to the Lions. The clubs are places where individuals can join together to give their valuable time and effort to improving their communities and the world.

Where there is a need, there is a Lion. There are 1.4 million Lions around the world, 47,000 Lions Clubs in more than 200 countries. For more than 100 years, Lions have been serving humanity.

The idea of the Lions Club began in 1917. A 38-year-old Chicago business leader named Melvin Jones told members of his local business club that they should reach beyond business issues and address the betterment of their communities and the world. They agreed.

Three years later, Lions Clubs became an international organization. Melvin Jones inspired generations of people to become civic-minded individuals, dedicated to using their talents and ambitions to improve their communities without financial reward.

Melvin Jones had a personal code: "You can't get very far until you start doing something for somebody else."

Madam Speaker, service to others is what makes the Lions Clubs International such a powerful force for good in the world.

There are nearly 70 Members of Congress who are involved in service organizations, and that is why I am proud to be working with my colleague Congressman JIMMY PANETTA to establish the Congressional Service Organization Caucus. We plan to launch the caucus soon.

It will support the many operations that are dedicated to giving back to their communities. I encourage my colleagues to join because there are few gifts greater than the gift of time and service to others.

Madam Speaker, Lions Clubs International is on Capitol Hill today to raise awareness about how helpful service organizations are to communities across the Nation.

I am grateful that Lions Clubs around the globe serve millions annually, and I am so proud to be a member of an organization that not only lives up to its remarkable ideals but exceeds them time and time again.

NEWBORN SCREENING SAVES LIVES

The SPEAKER pro tempore. The Chair recognizes the gentlewoman from California (Ms. ROYBAL-ALLARD) for 5 minutes.

Ms. ROYBAL-ALLARD. Madam Speaker, I recently introduced the Newborn Screening Saves Lives Reauthorization Act, which will continue the important work of the original bill and expand its critical programs to improve infant health across the United States. Every year, thousands of babies are born with genetic, metabolic, hormonal, and functional conditions that severely affect their development.

Fifty years ago, these rare disorders in infants would have gone undetected until symptoms appeared, often too late to provide them with the essential treatment needed to prevent lifelong disability or even death. Today, we can give newborn babies a simple blood test that can identify such life-threatening genetic illnesses before symptoms appear.

In 2008, Congress passed my original bill, which was a major step toward establishing newborn screening guidelines across the United States. Until that time, only 10 States and the District of Columbia required newborn screening for a complete panel of recommended disorders, and there was no Federal repository of information on these diseases. Today, 49 States and the District of Columbia screen for at least 31 of the 35 currently recommended core conditions.

Each year, with newborn screening, healthcare professionals identify approximately 12,000 babies who test positive for one of these rare conditions. This invaluable early detection allows for timely treatment to prevent long-term damage and severe health complications, which gives babies the opportunity to live relatively normal and healthy lives.

For thousands of mothers and families, this early and simple intervention can also reduce the emotional stress of trying to identify their baby's correct diagnosis.

Investments in newborn screening can also save up to \$1 million over a child's lifetime. This is a significant savings for American families and our financially burdened healthcare system.

While it is true that since the original passage of the Newborn Screening Saves Lives Act, significant advancements have been made in early detection and treatment, serious gaps in newborn screening remain. The Newborn Screening Saves Lives Reauthorization Act will build on the current newborn screening infrastructure and strengthen early detection of preventable disease.

To ensure the quality of laboratories involved in newborn screening, the bill reauthorizes the Centers for Disease Control grants, and it continues HRSA grants to empower parents and health professionals with education and resources to improve newborn screening.

The bill also renews the Secretary's Advisory Committee on Heritable Disorders in Newborns and Children, which maintains and updates the recommended uniform screening panel that States adopt and implement.

The bill funds research to identify new screening technologies and treatments, and a new provision in the bill commissions the National Academy of Medicine to issue recommendations to modernize newborn screening systems into the 21st century.

The Newborn Screening Saves Lives Reauthorization Act will continue to ensure that parents and health providers are knowledgeable about the value of newborn screening, and it will help ensure that infants across the United States receive comprehensive and consistent testing.

A coalition of public health groups, including the March of Dimes, the Association of Public Health Laboratories, the American College of Medical Genetics, and the National Organization for Rare Disorders, support the Newborn Screening Saves Lives Reauthorization Act. Their leadership has been critical to advance newborn screening across the United States.

Madam Speaker, newborn screening is one of the most important public health interventions of the 20th century. It is critical that, in the 21st century, we continue and strengthen the programs and research of the Newborn Screening Saves Lives Act.

I urge my colleagues to sponsor the Newborn Screening Saves Lives Reauthorization Act to enhance the lives of hundreds of infants and families each year in the United States.

RECOGNIZING ZANE MOORE OF THE BUCKS COUNTY YMCA

The SPEAKER pro tempore. The Chair recognizes the gentleman from Pennsylvania (Mr. FITZPATRICK) for 5 minutes.

Mr. FITZPATRICK. Madam Speaker, I rise today to recognize an individual and organization in Bucks County, Pennsylvania, working to make our community a better place.

Earlier this month, Zane Moore, the president and CEO of the YMCA of Bucks County, walked across the entire county to raise awareness of the positive impact the YMCA has on our neighbors and funding for its programs.

Last Thursday, Zane began his trek at the YMCA in Quakertown, wrapping up at the YMCA in Doylestown. He picked up on Friday where he left off, completing his journey that same day, all the way to the YMCA in Lower Bucks County in Fairless Hills.

Madam Speaker, I applaud Zane and all the local leaders who joined him along the way on his journey. We appreciate the work of the YMCA and all of its efforts to promote education, physical well-being, and recovery programs for those in our community.
