

In his flood of executive orders, President Biden has already stopped deportation, lifted travel restrictions from terrorist countries, halted border wall construction, empowered sanctuary cities, weakened asylum policies—I am running out of breath, Madam Speaker.

I welcome all freedom-loving and law-abiding citizens who want to make a better life for themselves in this country, but we must respect the sovereignty of this country, we must respect the rule of law, and we must always respect the American people's safety first.

YOUTH MENTORING MONTH

(Ms. SCANLON asked and was given permission to address the House for 1 minute.)

Ms. SCANLON. Madam Speaker, I rise today in recognition of Youth Mentoring Month, which we celebrate in January.

Established in 2002, Youth Mentoring Month celebrates the powerful impact of mentoring relationships and raises awareness about the need for more caring adults to become mentors in their communities.

In 2006, I created a career development and mentorship program at Constitution High School in Philadelphia and, throughout the years, I have served as a mentor many times over.

We often talk about mentoring in terms of the benefits to young people, but what surprises so many people about mentoring is the emotional satisfaction and benefits to the mentor. Whether it be through a classroom, an arts program, or a local youth sports team, mentors provide young people with the guidance and encouragement they need to find success and reach their full potential.

As co-chair of the bipartisan Congressional Youth Mentoring Caucus with Representative JAIME HERRERA BEUTLER, I look forward to celebrating and promoting mentoring programs across our country.

CHINA CONTINUES TO SEEK GENETIC TECHNOLOGY

(Mr. MURPHY of North Carolina asked and was given permission to address the House for 1 minute.)

Mr. MURPHY of North Carolina. Madam Speaker, today I would like to bring attention to a troubling assessment that was issued by the National Counterintelligence and Security Center on Monday.

China continues to aggressively seek to acquire Americans' genetic information. They have targeted American hotels. They have targeted government agencies, as well as our universities, through hacks and ill-intentioned partnerships. They recently even tried to buy fertility clinics in the United States to gather American DNA.

And as was catalogued on "60 Minutes" last week, the Chinese are now targeting family research databases that Americans innocently use to research their family trees.

Make no mistake, our healthcare information can be and will be used against us. The Chinese have already demonstrated the lengths to which they are willing to go to use genetics against their own people as they experiment on the Uighurs in the Xinjiang province. This threat cannot be ignored.

China has already received personally identifying information on most Americans. As citizens, we must take better control of our information, and Congress must act to keep this problem from getting worse.

RECOGNIZING THE LEGACY OF THE GREENSBORO FOUR

(Ms. MANNING asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Ms. MANNING. Madam Speaker, on February 1, 1960, four young Black men sat down at a Whites only Woolworth's lunch counter in Greensboro, North Carolina, and asked to be served. These students from North Carolina A&T State University had trained for weeks to be able to withstand the hostility and abuse that would be thrust upon them.

The next day, the "Greensboro Four" were joined by women from Bennett College and Greensboro Woman's College. The courage demonstrated by these students sparked a national sit-in movement that spread to 55 cities in 13 States. The sit-ins lasted for 6 months until, finally, the Woolworth's lunch counter was integrated.

As the Representative from Greensboro, I join my colleagues, Representatives ADAMS and BUTTERFIELD, in introducing a resolution to recognize the legacy of the Greensboro Four, and follow their lead in fighting for a future that will bring equal rights to all people.

RECOGNIZING THE SERVICE OF JOSHUA GRANT

(Mr. WILSON of South Carolina asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WILSON of South Carolina. Madam Speaker, I am grateful for the service of the Correspondence Director of the Second Congressional District, Joshua Grant. This week he is joining the office of my fellow Charlestonian, Senator TIM SCOTT, as a Legislative Correspondent for Finance.

Josh hails from the beautiful community of Walterboro, South Carolina, and joined the office of the Second District shortly after graduating from Benedict College, an historically Black college in Columbia, in 2016. During his time in the office, Josh continually

went above and beyond and made every constituent and guest feel welcome. He instituted a small-town sense of community to Capitol Hill.

Congratulations to his parents, Joseph and Diannia Grant, as well as his siblings, Tahnee Johnson, Tiffany Gist, Lisa Grant, and Jason Grant, for raising a kind, smart, and inspired young man, a favorite of my wife, Roxanne.

In conclusion, God bless our troops, and we will never forget September the 11th in the global war on terrorism.

After last night, Republicans are united to stop socialism which destroys jobs.

EXECUTIVE ORDER ON KEYSTONE PIPELINE

(Mr. BAIRD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BAIRD. Madam Speaker, I rise today in opposition to President Biden's executive order to revoke the permit for the Keystone pipeline.

This decision was political, provides no benefit to the environment, and it came at a cost of approximately 11,000 good-paying American jobs.

President Biden cited concerns regarding climate change for his reason on stopping the pipeline. But under President Obama and Vice President Joe Biden, the State Department conducted a review and found the pipeline to have minimal impact on the environment.

Now, instead of having the pipeline, the oil from Canada will now be transported in less safe ways like trucks and railways.

Axing the Keystone pipeline destroyed thousands of jobs, won't reduce the greenhouse gas emissions, and only will deepen the divide on the issue of climate change.

CONDEMNING ABORTION

(Mr. GROTHMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GROTHMAN. Madam Speaker, our wonderful country, America, has been given material wealth beyond belief, plus natural beauty that I think is greater than anything around the world.

In 1973, how did this country respond to those gifts? The United States Supreme Court, in *Roe v. Wade*, legalized abortion, something that even in days before the ultrasound, almost was universally condemned around the world. Since that time, 62 million unborn babies have had their lives cut short in America.

The United States is one of only seven countries in the world where late-term abortions are legal, joining countries like China, North Korea, Vietnam, and then Singapore, Canada, and Holland.

Now, we, under the current administration, look to push for still more
