ADDITIONAL STATEMENTS

POWER OF PUBLIC-PRIVATE
PARTNERSHIPS

• Mr. DOMENICI. Mr. President, I want to share with you and my colleagues an interesting experience from the last recess. It's a great example of the power of public-private partnerships. Improved mining tools, detection of land mines, public-private partnerships, and Cooperative Threat Reduction programs may not seem to be closely related, but I visited with a small business that is demonstrating the power of integrating several different national programs into a focused approach to some of our most challenging technical problems. And the fact that this small business is located in a remote corner of New Mexico, far from major population centers, is testimony to the ability of our nation's small business to compete in the most complex business arenas by carefully utilizing the power of well crafted partnerships.

Larry Stolarczyk of Raton Technology Research (RTR), in Raton, NM leads this unique small business. He's built a range of products through partnerships with Los Alamos and Sandia National Laboratories using different approaches. And he even brought in expertise from Russia through the Initiatives for Proliferation Prevention Program.

RTR tapped into different federal programs to build their products. In some cases, they contracted directly with a national laboratory when that laboratory had a unique capability that wasn't available from U.S. industry. In that case, RTR paid the full support costs for the national laboratory personnel. RTR has also used the CRADA or Cooperative Research and Development Agreement approach, enabled by my National Competitiveness and Technology Transfer Act of 1989. A CRADA enables cost-shared research involving both industry and laboratory scientists working toward common goals.

Where a research subject is closely related to a laboratory's mission, the CRADA is a wonderfully cost-effective way for industry to tap into national
