care is needed; and developing educational materials for parents, teachers, and health care practitioners that will increase recognition of the signs of visual impairment in children. The Vision Care for Kids Act will serve as an incentive to provide eye care to those youngsters who are in need of treatment and are currently unable to access care.

This year, we are working on the re-authorization of the State Children's Health Insurance Program (SCHIP). SCHIP was created to provide health care to millions of children who were previously uninsured. Over the last ten years, we have seen the positive impact of this essential program. Passage of the Vision Care for Kids Act will be a key component of ensuring that we have a comprehensive children's health care delivery system in this country. I look forward to working with Senator Bond and my colleagues to see that this legislation is not only is not only passed by this body soon, but that it is signed into law.

By Mr. DORGAN (for himself and Mr. CRAIG):
S. 1118. A bill to improve the energy security of the United States by raising average fuel economy standards, and for other purposes; to the Committee on Commerce, Science, and Transportation.

Mr. DORGAN. Mr. President, today I am pleased to be joined by Senator CRAIG to introduce legislation called the Fuel Efficiency Act of 2007. This legislation is a key component of broader legislation that my colleague and I recently introduced on March 14, 2007. That legislation is a balanced plan with the overall goal to improve the energy security of the U.S. through a 50 percent reduction in the oil intensity of the economy by 2030.

This is important to me because the United States remains dangerously dependent on foreign sources of oil. Today, 60 percent of our oil comes from Iraq, Kuwait, Saudi Arabia, Nigeria, Venezuela, and other unstable nations of the world. This is very troubling to me.

Our larger proposal is grounded in four cornerstone principles. The first principle is achievable, stepped increases in fuel efficiency of the transportation fleet. The second principle promotes increased availability of alternative fuel sources and infrastructure. The third principle calls for expanded production and enhanced exploration of domestic and other secure oil and natural gas resources. Finally, the fourth principle improves the management of alliances to better secure global energy supplies.

In the United States, we use about 67 percent of our oil to power our vehicles. This is the area where we are least secure and increasingly dependent. For three reasons and more, we introduced S. 875 to bipartisan consensus and an enhanced approach to securing our future energy through reducing our dependence on foreign oil.

I am also a member of the Senate Commerce, Science and Transportation Committee which has jurisdiction over the fuel economy standards of our Nation’s vehicle fleet. I look forward to working with Chairman INOUYE, Ranking Member STEVENS, and other members of the Committee interested in enacting strong, fair, and forward-looking fuel economy standards.

It should be noted that this is the first time that both Senator CRAIG and I have had support for increased fuel economy standards beyond the incremental steps that the current administration has made to date. Our Nation’s fuel economy standards have not significantly changed since the mid-1980s. We now have lower passenger vehicle fuel efficiency standards than Japan, the European Union, Australia, Canada, and yes, even China.

The bill we have introduced today reforms and strengthens fuel efficiency standards by establishing an annual 4 percent increase in the fuel economy of the entire new vehicle fleet, including automobiles, medium trucks, and heavy trucks from 2012-2030. The National Highway Traffic Safety Administration will have discretion to invoke “off-ramps” if it is determined that the increase is not technologically achievable, creates material safety concerns, or is not cost effective.

Senator CRAIG and I came together to develop a new pathway forward because the decline in security-related measures must be taken now to address our long-term security, economic growth and environmental protection. There is no silver bullet to solving our energy dependence. Digging and drilling is a strategy I call yesterday forever. Conservation alone is not the answer. Renewable fuels hold promise, but we need to do much more here. We believe the combination of steps sets the right pathway to U.S. energy security, and we look forward to moving increased fuel economy standards through the Senate Commerce Committee.
