Mr. President, the American public deserves a system that supports an efficient and timely FDA approval process. When a patient begins to take a prescription drug, they buy on that shelf has been approved by a thorough and complete process. When a nervous parent takes the scope or the needs of sick children. That means is essential, often life-saving devices do not meet the size or the scope of the needs of sick children. This bill will push manufacturers to develop and produce devices that are safe and effective for children and infants. Through incentives and investor outreach, this bill will ensure that exciting advances in lifesaving devices are not just limited to adults.

This legislation also delivers greater safety and access. I believe it will improve the way we deliver safe innovative health care in America, and it is really my hope it will also begin to restore confidence in the institutions that safeguard our public health.

The American public deserves nothing less than the gold standard of care from our FDA. When a nervous parent or worried senior visits their corner pharmacy, they deserve to know the product they buy on that shelf has been approved through and complete process. When a patient begins to take a new drug, they deserve a system that has actively tracked that drug and provides the patient with information on any risks they might face. Everyone—drug companies, researchers, patients, and doctors alike—deserves a system that supports an efficient and timely FDA approval process.
