

At my request, \$2,500,000 was included in H.R. 3326 to provide upgrades to the Joint Fires and Effects Trainer System (JFETS) located at Fort Sill, Oklahoma. The current immersive simulation training capability suffers from one significant drawback—the one-to-one instructor/student requirement. The funding provided for this project would increase the ability for this program to upgrade the voice recognition technology of JFETS and allow a single instructor to manage nine concurrent calls for fire training sessions in the Open Terrain module simultaneously and improve efficiency by 800 percent. Additionally, the project will develop an interactive application to drill soldiers in the five essential elements of accurate predictive fires to prepare them before they train in the immersive environment and reinforce the training before they deploy.

Title of Project: Weapons of Mass Destruction Multi-Sensor Response and Infrastructure Project System

Amount of Project: \$2,000,000

Account:

Project Recipient: Triarii Scientific, LLC, 7118 South Colombia Place, Tulsa, OK 74136

At my request, \$2,000,000 was included in H.R. 3326 for Triarii Scientific of Tulsa, Oklahoma to provide funding to enhance and improve the Oklahoma National Guard's (OKNG) 63rd Weapons of Mass Destruction (WMD) Civil Support Team's (CST) ability to prevent and respond to terrorist attacks. The OKNG-CST requires next generation capability that improves their ability to respond to WMD-related threats while systematically identifying truly critical vulnerabilities; thus, render state and national infrastructures less exposed.

This funding will be used to upgrade existing CST equipment to a fully integrated and mobile system that combines communications, sensors, vulnerability and engineering assessments of critical infrastructure facilities via the Homeland Defense Operational Planning System (HOPS), and a command and control suite.

The upgraded mobile system will provide complete command and control abilities, interoperable wireless communications, a suite of Acoustic, Biological, Radiological, Nuclear, Explosives (ACBRN-E) and Command, Control, Communications, Computers and Cyber for Intelligence, Surveillance and Reconnaissance (C5ISR) sensors. All system integration, test, certification, infrastructure and vulnerability assessments will be executed in conjunction with the Oklahoma State University Multispectral Laboratories (OSU-UML) and Lawrence Livermore National Laboratories (LLNL) with operational testing overseen by the Joint Interoperability Test Command (ETC).
