

the British Empire to its knees. Which is actually true, and we should learn from his example.

Indeed, Dr. King, a disciple of Gandhi, applied those strategies to the American civil rights movement to great success. And were it not for Dr. King and the other heroes who laid down their lives during the civil rights movement, I would not be standing here before you, and we wouldn't even be standing up or talking about The Daily Stormer, Breitbart, or Trump in defending immigrants and other vulnerable communities.

So we owe the civil rights movement a great debt. I want to follow in those footsteps.

So I read the headlines in Breitbart and I went back to look at what I actually said. You know what? I stand by it and I won't back down.

OCEAN ACIDIFICATION

The SPEAKER pro tempore. The Chair recognizes the gentlewoman from Florida (Ms. ROS-LEHTINEN) for 5 minutes.

Ms. ROS-LEHTINEN. Mr. Speaker, I rise today to talk about the alarming crisis that is ocean acidification. This is not only an environmental issue, but it is an economic issue as well, and one that greatly impacts my congressional district in south Florida.

South Florida's world-famous beaches, delicious seafood, incomparable fishing, boating, and sailing, and spectacular marine life are all dependent on a healthy ocean. However, our oceans are becoming more and more acidic as seawater absorbs increasing amounts of carbon pollution, causing what is known as ocean acidification.

This increased acidity makes it harder for corals, oysters, shrimp, lobster, and other sea animals to develop their shells or skeletons, which they rely on for survival to grow. These organisms are extremely important to the vitality of our ecosystem.

In addition, corals host a vast number of ocean species, protects coastlines from large waves and hurricanes, and attract visitors with its beauty.

Data from the National Oceanic and Atmospheric Administration—NOAA—also suggests that tourism, recreation, and fishing related to south Florida's coral reefs alone generates more than \$4.4 billion in local sales and \$2 billion in local income.

Ocean Conservancy, which is a tremendous environmental advocacy group, has been a champion in raising awareness about the negative impact of ocean acidification. Recently, they premiered an outstanding documentary, a short film which highlighted two gentlemen who either work for or own ocean-dependent businesses that are located in my congressional district.

Dale Palomino, right over here, this fine-looking young man, he is the general manager and head chef at Captain's Tavern Restaurant and Seafood

Market, a family-owned business in Miami and one of my favorite places to dine with my husband, Dexter, and our grandkids.

And Captain Ray Rosher, right here, who owns and operates Miss Britt Charter Fishing and R&R Tackle in Coconut Grove, also located in my congressional district.

In addition, this film highlights ocean expert, Dr. Chris Langdon, a professor from my alma mater, the University of Miami—Go Canes. His research on coral reef ecosystems has allowed us to better understand the capacity and limitations of coral to adapt to a changing physical and chemical environment. Dr. Langdon has also been a leader in bringing stakeholders together to learn about the threats posed by ocean acidification to commercial and recreational fishing and tourism industries throughout Florida.

These two gentlemen know a lot about the impact of ocean acidification on their business because saltwater recreational and commercial fishing combined support an estimated 175,000 jobs across our beautiful Sunshine State.

Mr. Speaker, it is truly astounding the amount of jobs and revenue that come out of ocean-related industries. Our country enjoys thousands of miles of coastlines with so many people benefiting from their environment and providing jobs and nutrients for their family. From the oyster hatcheries in the Pacific Northwest, to the lobster in Maine, and South to the reefs and fish in Florida, the real world implications of ocean acidification will spell trouble for these ocean-dependent jobs, which is why we must not wait until the tragedy truly unfolds.

My constituents and I are also blessed to live, to work, and to play in the paradise that is south Florida. Our kids and our grandkids, they want to enjoy the same positive experiences we have, but in order to do so, it is vital that we act now.

In Congress, we need to do a better job at listening to all stakeholders who are speaking out, and we need to continue to promote the valuable work of researchers, people like Dr. Langdon, the work that they are doing to ensure that these important marine research institutions and organizations have the resources they need.

My district is home to a community that cares deeply about the ocean, and it is because of the efforts of folks like these two gentlemen and Dr. Langdon of south Florida that I have learned more about the issues and what is at stake.

I remain committed to continue to work with my colleagues, with industry experts, with all stakeholders in tackling head-on these important issues and lead in mitigation and adaptation solutions to the changing ocean around us and, indeed, across the globe.

RETURNING TO REGULAR ORDER

The SPEAKER pro tempore. The Chair recognizes the gentleman from Maryland (Mr. HOYER) for 5 minutes.

Mr. HOYER. Mr. Speaker, yesterday we watched as Senator JOHN MCCAIN returned to the Capitol after having been diagnosed with cancer and undergoing a serious operation. All of us are praying for his swift and full recovery.

In earlier days, as we all know, he faced danger with courage. He is doing the same again right now. When he spoke yesterday from the Senate floor, he talked about a time when legislators, Republicans and Democrats, despite their differences, worked together to make progress, albeit incremental, on major issues through discussion and compromise.

He lamented, as do I, the recent tendency to seek total partisan victory or nothing at all, something we see as much in the House as in the Senate.

Senator MCCAIN said this: "We've been spinning our wheels on too many important issues because we keep trying to find a way to win without help from across the aisle."

He concluded in that paragraph: "... we are getting nothing done."

Instead, Senator MCCAIN proposed legislators ought to return to regular order. Regular order, for those who aren't familiar with the day-to-day workings of Congress, simply means doing things in the proper way: drafting a bill in committee, holding open hearings, marking up with amendments, reporting it out, and then bringing it to the floor for amendment and debate before voting on it. This process, this regular order of business affords every member an opportunity, regardless of party or district, to have input and help shape the policy. That is the way it should be.

The product of such a process, as Senator MCCAIN described it, would be "something that will be imperfect, full of compromises, and not very pleasing to implacable partisans on either side." But he concluded it was one that "might provide workable solutions to problems Americans are struggling with today."

Mr. Speaker, that is how our system is supposed to work.

□ 1015

I started my career in this body in 1981. Shortly thereafter, I joined the Appropriations Committee. I like to tell people that I served on the Labor, Health and Human Services, Education, and Related Agencies Subcommittee, and there were 13 of us. The Democrats were in the majority, and there were eight Democrats and five Republicans. I used to tell people that you could take the 13 of us, throw us up in the air, have us come down in random seats, have a markup, and you would have been hard-pressed to identify which party each member represented. Today, lamentably, Mr. Speaker, it would take you about a minute to determine those differences.
